

Child Care Honor Roll

Immunizations are one of the most effective tools of public health. All children should be immunized against ten serious childhood diseases, and most of the vaccinations should be received before age 2. Childcare providers can be very helpful in making sure that young children are immunized appropriately. During 2003, the Galveston County Health District reviewed 7653 immunization records of children ages 5 and under attending 168 childcare facilities. Two visits, an initial and a follow-up, to each childcare facility are made to conduct these reviews. The Galveston County Health District wishes to recognize the childcare providers listed below who received Gold Medal Awards because at least 95% of their immunization records were up-to-date at the initial review.
